Raglan WWTP Discharge Consent Application Project

APRIL 2022 PRE RECORDED UPDATE TO COVER

- (a) Treatment Optioneering what this means?
- (b) Land securement progression;
- (c) Next Steps

Treatment Update: Immediate

Challenge:

Non-compliant Total Suspended Solid Trend over warmer months —*Immediate (Stage 1) upgrade proposed :*

Treated WW conditioning / Tertiary filter / Backwash),

Next Step

Necessary governance/regulatory discussion.

Followed by a long-term upgrade (LTP budget) is to fully resolve in a manner that suits 'Best Practical Option' (BPO)

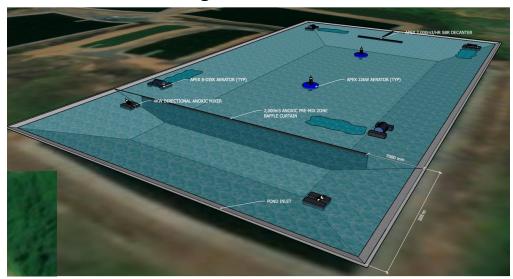

Treatment Update: Technical Recommendation for Long Term

Upgrade:

Challenge:

Progressing engineering option breakdown that is responsive to differing BPO scenarios, affordable/represents best practice.

Key Query: Does this lock in discharge solution? No

Next Step:

- (i) Internal engineering refinement
- (ii) Enhanced governance/ key stakeholders/ Haapu & regulatory discussion

Short listed Options

Land Option L1:

- (T) Existing <u>upgraded</u> treatment process, tertiary membrane +
- (D) Combined public land discharge and alternative discharge
- (i.e. winter flow culturally treated then point source <u>or high rate to sands</u>)

Soil: Older Clay

Land Option L2:

- (T) Existing <u>upgraded</u> treatment process
- (D) Private land discharge and storage

Soil: Younger Loamy

Discharge Update: Sub surface drip irrigation

Public Land – Wainui Reserve (Short listed option)

Discharge Update: Sub surface drip irrigation

The Wainui Reserve is considered:

i. A potentially useful addition in combination with <u>another</u> parcel of land to provide a complete land disposal solution; or,

ii. A standalone solution with culturally acceptable disposal to the Tasman Sea

Discharge Update: Sub surface drip irrigation on public reserve

- Council and Waters Governance Board have been updated on the progress and investigation of SDI within public reserve.
- Support was given on the principle, and process of engagement with the wider Whaingaroa Community on how co-utilisation of public reserve could contribute to such a solution.
- The Reserve Management Act would need to be adhered to, including assurance that the primary use of the reserve (amenity/public recreation) is maintained.

Key Queries: Does this mean the use of public land is destined to be the best practical discharge option?
